

Streamlining Item Management Enhancing Customer Service

Easy to Operate

Working with SmartX does not require any time-consuming and cost-intensive training. Thanks to its clear and familiar Windows-based interface, users can confidently manage PLU data centrally in no time. Data can be input via the 10-key numeric keypad for extra speed and convenience.

Efficient Data Management

By centralizing data management activities, SmartX minimizes the amount of time involved in updating product-related and price information and puts an end to double and multiple data entry. Homogeneous price and product data files are easy thanks to SmartX, freeing up more time for sales employees to spend on customer service.

Complete Transparency

SmartX offers extensive auditing and reporting capabilities, giving food retailers accurate insights into their sales figures and transactions down to scale, employee and product levels. SmartX is packed with powerful tools to further enhance business and improve sales and profits.

Outstanding Flexibility

SmartX offers a wide range of convenient and high-performance functions that enable product information and prices to be changed in line with retailers' requirements at store, category and scale levels. SmartX facilitates fast and reliable changes between list prices and special offers – no more worrying about missed price changes after ad breaks.

Scale Management Software SmartX

SmartX is METTLER TOLEDO's scale management software for small to medium food retailers who want to simplify and streamline their item management in the fresh category.

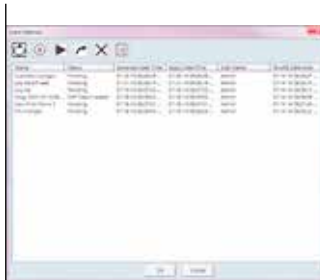

SmartX is an easy-to-use yet high-performance tool for maintenance and error-free management of all sales-related data stored on METTLER TOLEDO and Hobart* scales. From list prices, loyalty discounts and promotional offers to information about ingredients, allergens and nutritional values, SmartX is the key that unlocks at-a-glance and centralized item management.

Retailers save a huge amount of time with SmartX in terms of data input and significantly reduce the risk of errors in pricing and other product-related information at the point-of-sale.

SmartX Scale Management Software

Streamlining Item Management

- **Boost profits through smarter PLU and price management**
- **Minimize shrink with optimized price management and sales checks**
- **Ensure compliance and homogenous data files thanks to centralized data maintenance**
- **Optimize business processes by simplifying network and device management**

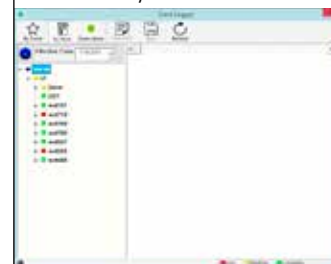

The Event Update Agent is responsible for executing all the scheduled tasks and events to and from the scale. The Event Update Agent continually monitors the system for any events that need to be processed.

SmartX allows users to view all information for individual records. Each type of record (PLU, Extra Text, Nutrifact, Grade, Action, and Graphic) is easily accessible by clicking on selections under the Data Management menu tree.

SmartX user can easily execute temporary price-only changes to existing PLU records in a matter of seconds. With Off-Sale- and On-Sale-Batches, changing prices is fast and easy.

Everything under control: The Event Logger clearly indicates which activities have failed, are still pending or completed successfully.

Technical Data

SmartX

Scale Compatibility

All METTLER TOLEDO retail scales in the following series:

North American models

- 8461
- UC-ST
- UC-CW
- UC-PW
- bPro*
- Impact Line
- 800 Series

European models

- UC3 Line
- bC Line
- Etica
- 800 Series
- FreshWay Line
- FreshBase Line

All Hobart* scales in the following series:

- Ultima**
- Quantum**

Stores

Unlimited

CPU

166 MHz Pentium processor (min.)

RAM

128 MB RAM (min.)

Hard Disk Space

Typically less than 500 MB

Operating System

Windows Server 2008® R2, Windows Server 2012 R2®, Windows XP® Vista, Windows 7® (32 bit/64 bit), Windows 10®

Communication

- TCP/IP Ethernet interface 10/100
- RS232 interface (optional for T-Net scales)
- IEEE 802.11b/g/n standard
- Up to 12 simultaneous scale connections per store (Multi-threading)
- Licenses and configuration options
- Stand-alone (single store mode)
- Client/server application (multi store mode)
 - up to 5 concurrent users
 - Unlimited stores
 - up to 99 pricing zones
 - store-level prices
